

Manpreet Singh

Father's name	:	Harbansh Singh
Age of farmer (years)	:	42
Educational qualification	:	Graduate
Mailing address	:	Village Baivaha, Post Mala, Pilibhit
Contact Number	:	08725885890
Land Holding (in Acres)	:	12.0
Paddy area (in Acres)	:	8.0

Experience of Farmer

Mr Manpreet Singh is a farmer of Baivaha village in district Pilibhit. He is a good progressive farmer. He used to burn all the crop residues in the field every year. After coming in contact with the KVK Pilibhit he understood about the in-situ management of crop residues and its advantages on his field. He came to know about the improved quality of soil after mixing of crop residues in the field, it also increased the organic matter content in the soil.

This time he did not burn the crop residues and used mulcher and reversible MB plough in most of his field and also used happy seeder for sowing of wheat in 1 acre of land. The fields in which he used mulcher and reversible MB plough, he noticed increased crop health and good percolation of irrigation water. Thus he saved around 2000 Rs/ acre in nutrients and irrigation management. In the fields with happy seeder sown wheat he saved 10 days in sowing of wheat and also saved 2000 Rs/ acre of field preparation. Now Manpreet Singh is so happy with these implements that he has decided to never burn any crop residue in the field in future.

Performance of wheat crop sown with happy seeder (2018-19)

Area under wheat sown with happy seeder (Acre)	Average yield of wheat (q/ha)	Average cost of cultivation (Rs/acre)	No. of Irrigation saved
01	23.0	5430.00	2
