Likely impacts of weather warnings on Agriculture and associated Agromet advisories

Do not Tether livestock under trees at this time, and farmers are requested not to venture outdoors during this inclement weather.

General Advisory:

Farmers are advised to download "Meghdoot App" to get the weather and weather forecast of the previous week, and "Damini App" to get information about lightning strikes. Take special care of the animals in changing weather, keep the animals and cattle shed clean. Always give clean and fresh water to the animals several times a day. In view of the weather warning, do not tie the animals under the trees. And harvest the ready crops and store them at a proper place. And do not go out of the house in bad weather.

SMS Advisory:

Rain accompanied in the coming days; therefore, carry out spraying operations on crops only when the weather is clear.

Crop Specific Advisory:

Crop (Stage)	Crop Specific Advisory
RICE	Excessive rainfall and humidity can lead to Bacterial Leaf Blight (BLB) and other bacterial blight diseases in the paddy crop. Therefore, farmers are advised to continuously monitor their crops.

Horticulture Specific Advisory:

Horticulture (Stage)	Horticulture Specific Advisory
BRINJAL	Prepare ridges for transplanting the ready brinjal seedlings and plant them on the ridges. Maintain a distance of 90 cm between ridges and 60 cm between plants.

Live Stock Specific Advisory:

Live Stock	Live Stock Specific Advisory
BUFFALO	The breeding season for buffaloes is about to begin. Therefore, all livestock owners should pay close attention to their animals during the morning hours and ensure that artificial insemination is performed at the right time. Special care should be taken to maintain cleanliness and hygiene for both the animals and the animal shed.

Likely impacts of weather warnings (General)

Continuous rainfall may lead to waterlogging in low-lying areas and disrupt normal activities. High humidity and moisture conditions can increase the risk of fungal and bacterial diseases in crops. Excessive moisture may also lead to a rise in the population of disease-spreading pests.

Impact based advisories (General)

Excessive rainfall can lead to waterlogging in fields, which may affect crop growth; ensure proper drainage arrangements are maintained. High humidity levels can increase the incidence of diseases in paddy, vegetables, and other crops.

Farmers are advised to download Unified "Mausam" and "Meghdoot" android application on mobile for Weather forecast and weather based Agromet Advisories and "Damini" android

application for forecast of Thunderstorm and lightening.
